

ROBERTS MOTOR COMPANY
DISTINCTION IN DESIGN

THE MIAMI SPYDER

Distinction in Design: a point of honor to those whose work is their signature. The creators of tomorrow's classics. Since the beginning, we've adhered to the belief that superior designing produced a higher quality of workmanship.

To exemplify, we present our Miami Spyder. Chosen to enhance the image of Don Johnson on "Miami Vice", the Spyder details the artistry and imagination to satisfy anyone. A new classic where all the classics had been established. Until now.

The sum is equal to the whole of its parts. We chose the materials for our Spyder not simply for their individual beauty, but because they are uniquely

suited to the function of the part. From the Corvette chassis to the stainless steel nuts, bolts and brackets, our Spyder is a marriage of excellence.

Roberts Motor Company offers this classic automobile in component form or as a turnkey product. Your choice or ours. As you inspect the Miami Spyder, you know you can trust ours.

Distinction in Design: a foothold on the future.

Carl Roberts

Roberts Motor Cars

I N C O R P O R A T E D

Thanks very much for your inquiry about our Miami Spyder and our Miami Coupe. We sincerely appreciate your interest in our cars.

Enclosed you will find brochures showing the cut-away view of the Miami Spyder Phase I Body Component Package and the Phase II Interior. See all the major components we have developed to make this ONE EXCITING SPYDER!

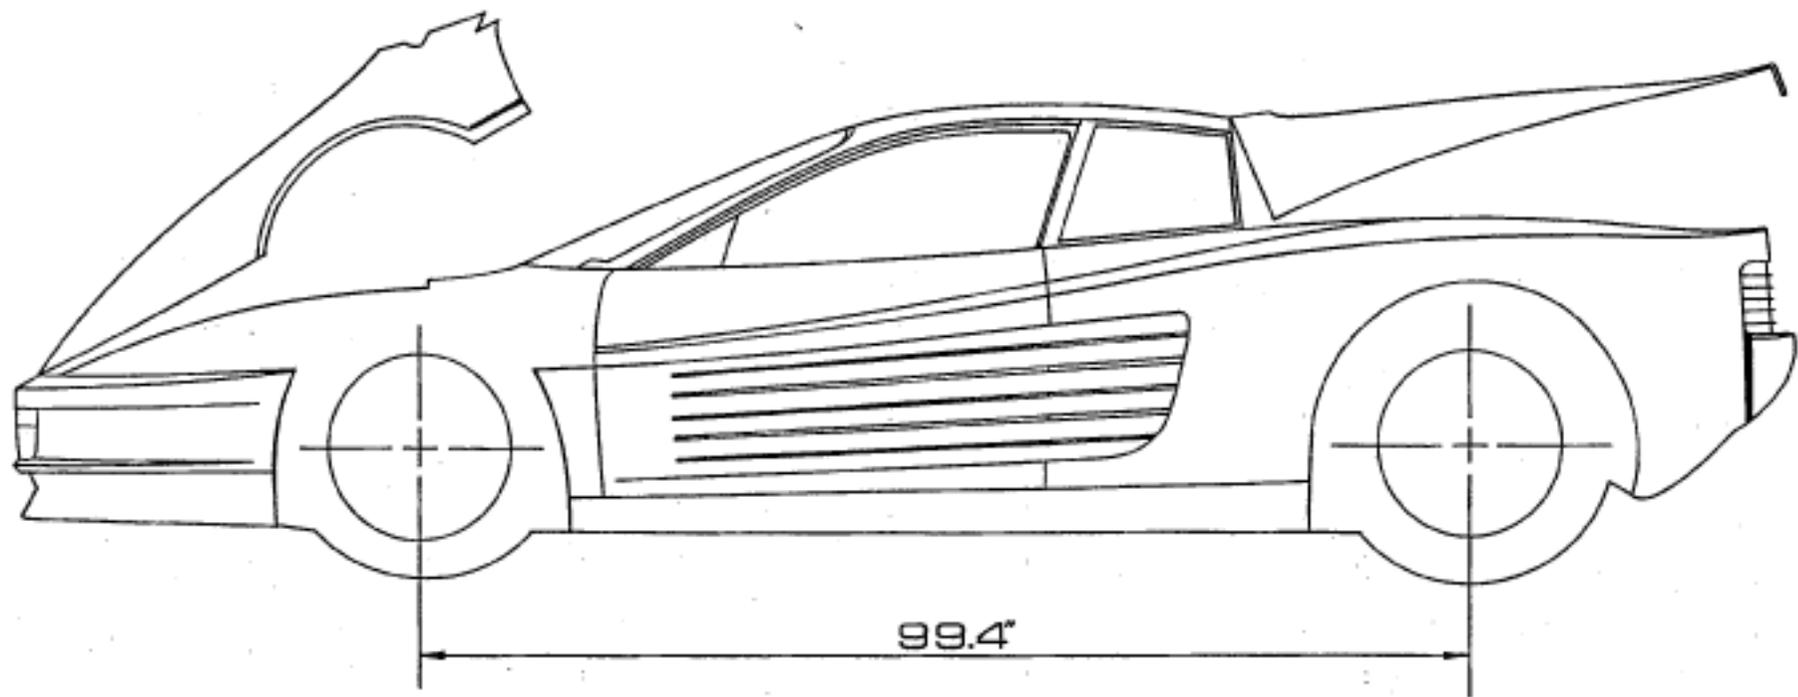

The current price for the Miami Spyder Phase I Body Component Package is \$8,500.00. A production deposit in the amount of \$2,500.00 is required upon order. The current price for the Phase II Interior Package is \$2,200.00. A production deposit in the amount of \$500.00 is required upon order. The balance on these units is due when they are ready for delivery.

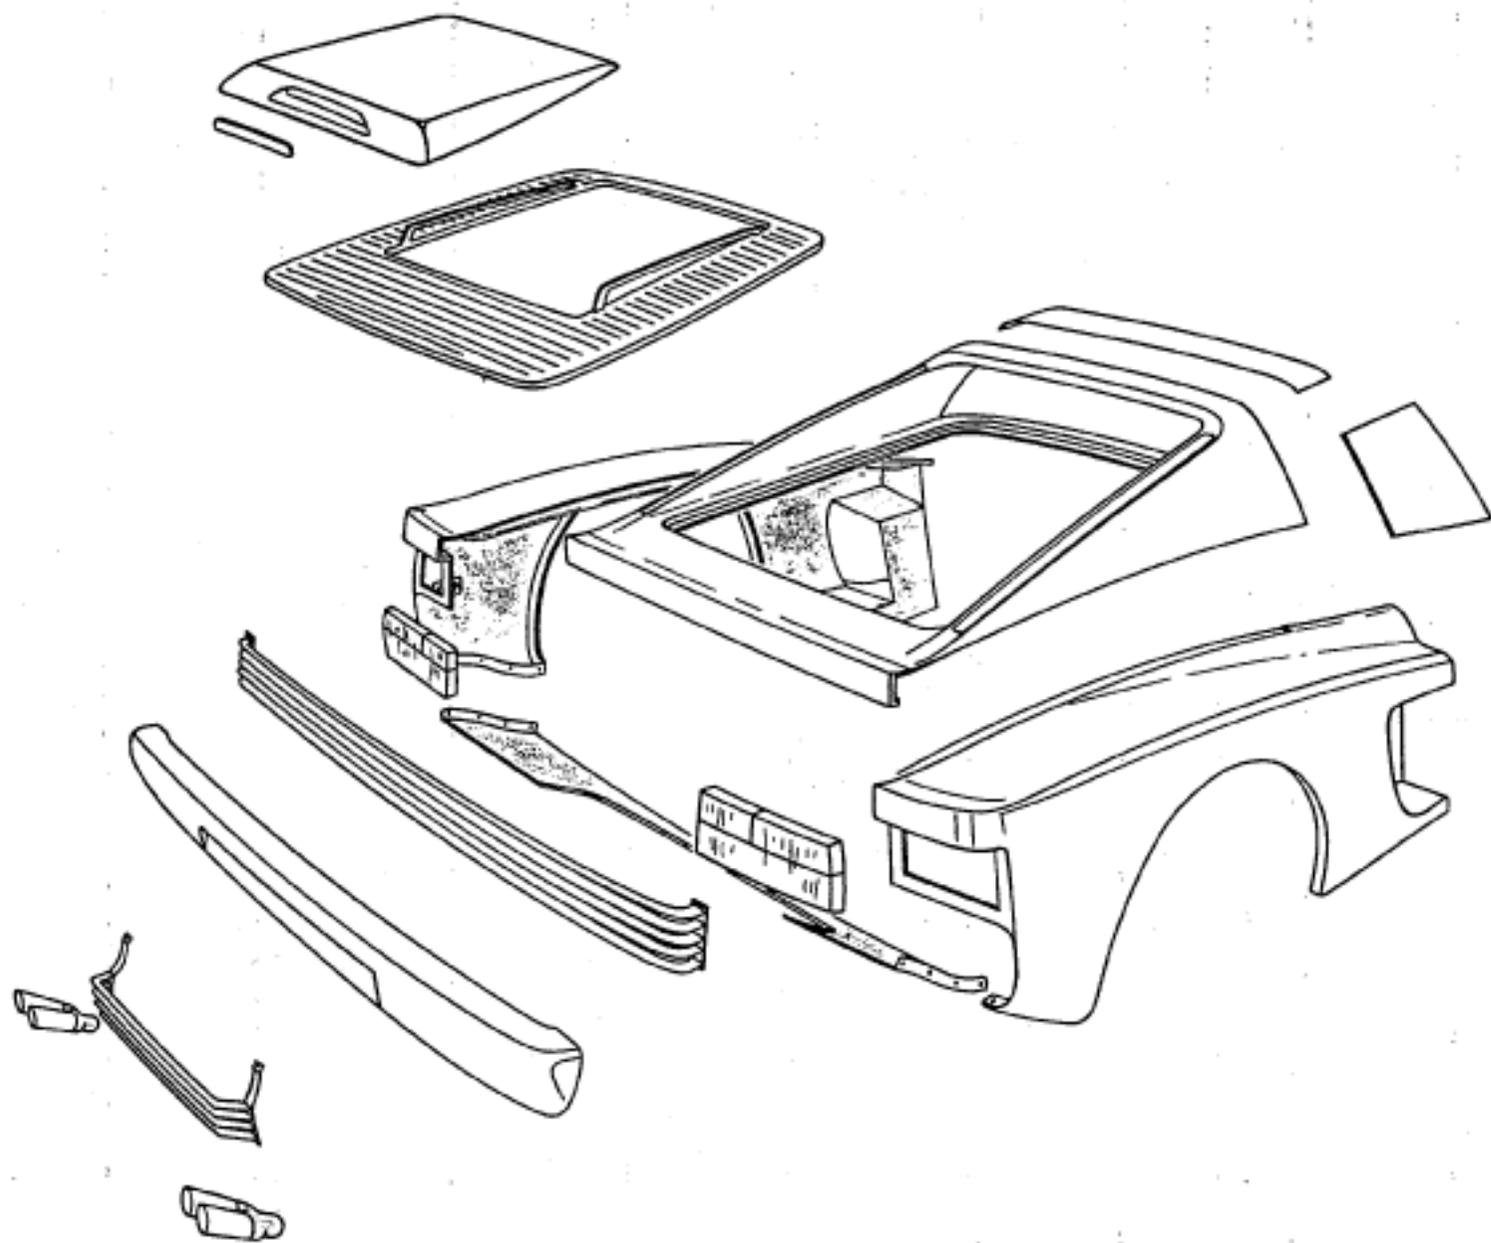

Our component package is designed to fit a 1968-1982 corvette chassis. In addition to the undercarriage components from the donor car you use, you will also need the windshield, front tub section (cockpit area), convertible door glasses, convertible top frame from the corvette, and the inner door frames (metal structure) from the corvette. If your donor car happens to be a coupe, this can be used; however, you will need to locate a convertible top frame. If you need help in securing this, we will be happy to assist you. The standard corvette interior can be used; however, we have optional interior available. (See Phase II brochure enclosed.) We also have options available such as European style seats, wooden or leather steering wheels, carpet, leather or vinyl for interior, and road wheels (wire wheels or MOMO 5-stars).

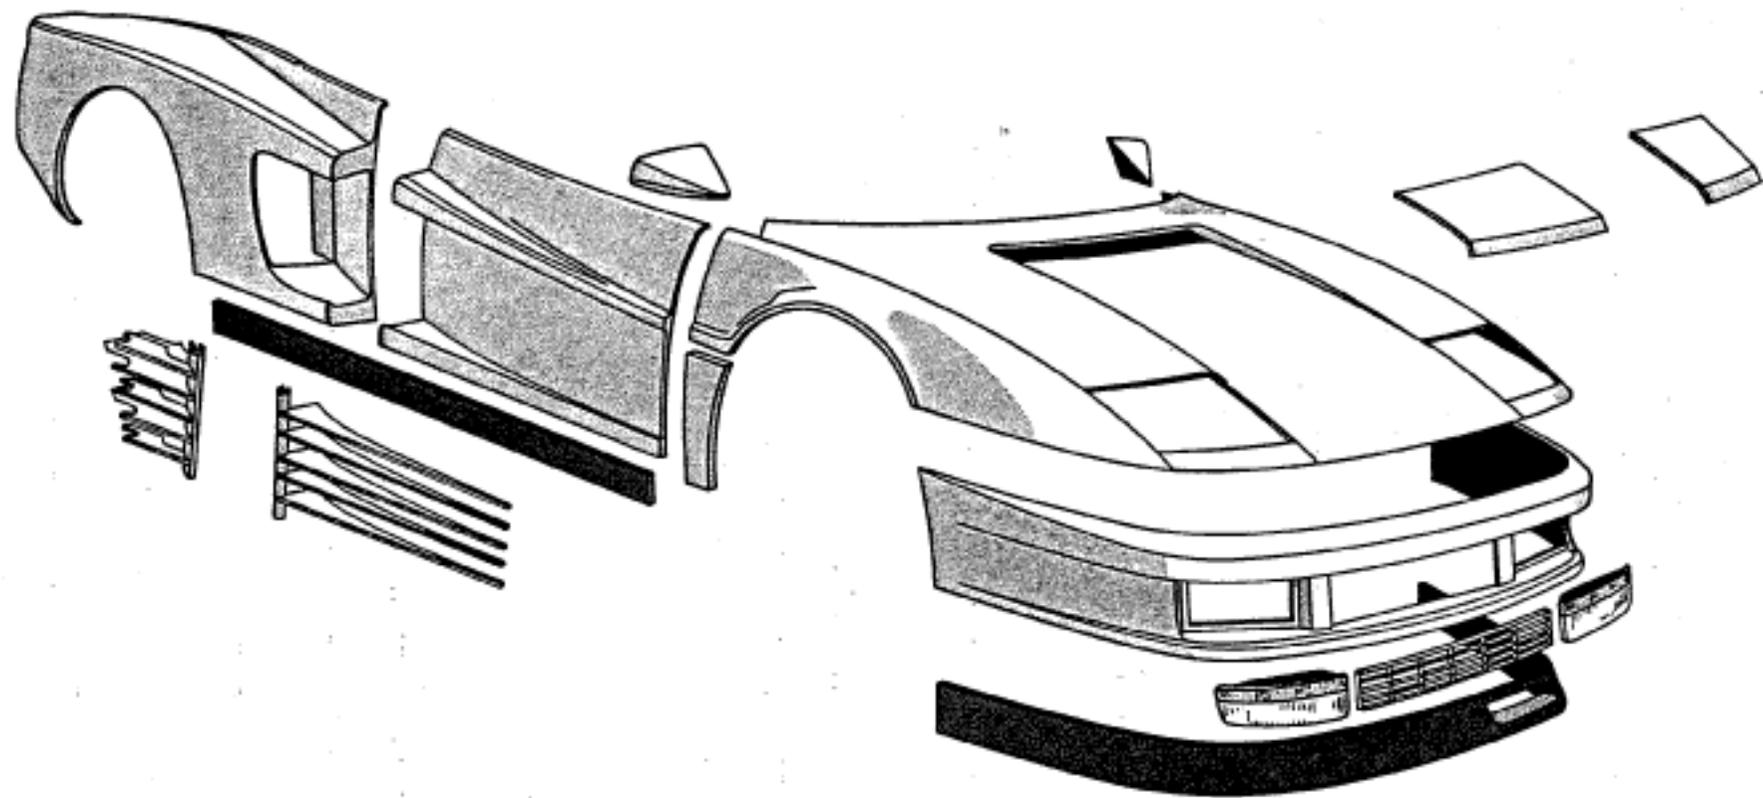

Also enclosed you will find a brochure showing the cut-away view of the Miami Coupe Body Restyling Package. This package is designed to fit a lengthened Pontiac Fiero Chassis. It includes the pre-metal and instructions for doing the chassis modification and includes the body components illustrated in the enclosed drawings. At this time, we are in the process of developing a new interior for the Miami Coupe which we anticipate being ready in 30-45 days.

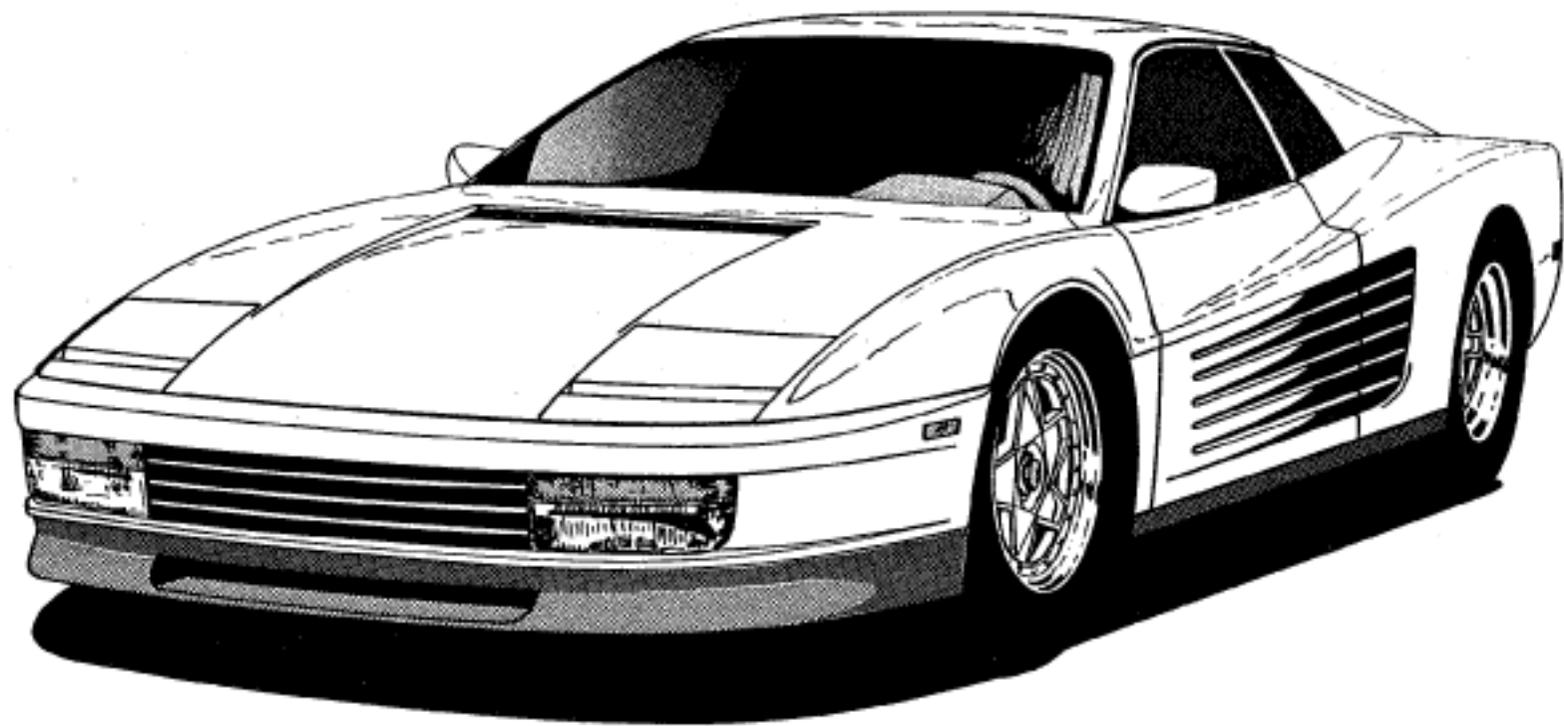

The current price for the Miami Coupe component package (kit) is \$10,500. A production deposit of \$2,500.00 is required upon order and the balance would be due when the parts are ready for delivery. There is an approximate 90 days delivery time for these components.
